

Location	Microsoft Teams
Date	13/08/2020
Participants	Paula (s3782041), Ian (s3788210), Josiah (s3782051), Aqram (s3547091), Taouit [David] (s3815539)
Scrum Master	Paula
Product Owner	Josiah
Agenda	<p>Thursday Meeting Agenda:</p> <ol style="list-style-type: none"> 1. Standup 2. Front-End Discussion 3. Running projects and Documentation

1. Standup

- Everyone provided an update where they were at.
- Questions asked: What have you been up to since the last time we had a meeting? Have you had any roadblocks/challenges and if you have, how can we help you? What are your plans for the next few days until the next meeting?
- Everyone was doing relatively well; no roadblocks. Josiah and Ian hadn't done much in the backend as they finished their designated tasks. Logout is to be implemented client-side not server-side. Paula and Aqram were still doing unit tests. Taouit finished the front-end and apologised for his absence in the prior meeting.

2. Front-End Discussion

- Taouit went through what he completed in the front end.
- Everyone else showed concerns about the added potentially unnecessary complexity of the project.
- Ian and Josiah proposed to use Taouit's existing code in a new project so that an easier version could be made. This way less experienced members of the team like Josiah, Paula and Aqram could also contribute.
- Taouit agreed and thought it was a good idea.

3. Running projects and documentation

- Taouit had trouble running the Java project. As a group we brainstormed together for half an hour to find a solution but nothing worked. After researching by himself, Taouit found a solution and was able to run the project.
- Paula and Ian had issues running the front-end, but Taouit mentioned that there was an accidental line in the .gitignore that prevented one of the dependencies from running. He has fixed this issue and everyone should be able to run it now.

- Because of these issues in running projects, it was decided to write documentation in order to be able to run the projects. Backend team will also write API documentation for endpoints.

Next meeting:

- Submission and documentation finalisation.
- Retrospective
